Doomsday plan activated: The real reason FEMA is in control and POTUS is now powerless

Looming extinction-level event: Celestial objects may be on a direct collision course with earth, White House issues plan to mitigate earthbound near-earth objects in last-ditch effort to save humanity. The first asteroid intersects earth's orbit Wednesday, April 15, then again on April 29, and beyond. This is not a drill but rather a real-world "live exercise."

By Shepard Ambellas - April 14, 2020

Preface

First of all, let me make clear that I myself am not saying that anything is going to impact the earth; it is NASA's variable data that shows meteor strikes are possible but not guaranteed. Furthermore a deflection plan has been implemented at a presidential level and is posted on WhiteHouse.gov for the naysayers so don't try and troll the messenger.

This report is the most important report you will ever read and serves as a proverbial roadmap for you the reader which will carefully guide you down a road of truth and facts revealing the real reason for the current lockdowns and full-scale

military mobilization and deployment which governments worldwide have recently diligently carried out in the name of the invisible enemy known as COVID-19.

This report is comprised of breadcrumbs which leads the reader to discover what is actually is and has been taking place on a global geopolitical level, and at a local level here in the United States and will explain why governments worldwide have positioned a plethora of military and other assets and have locked down entire populations in the name of the emerging invisible enemy known as COVID-19.

The information contained in this report is highly sensitive and is all based in fact. This information is real and needs to be taken seriously by the reader as there is not much time left.

1.8K

SHARES

This report is to serve as an early warning system to the populace and reveals what is to come.

It is absolutely imperative that this information gets shared with each and everyone you know in a rapid and organized fashion.

Godspeed.

(**INTELLIHUB**) — After the discovery of the planet Neptune in the year 1846, astronomers speculated that another planet may exist beyond its orbit and so the hunt began for a large trans-Neptune object.

Fast-forwarding to the year 1847, the planet Uranus had nearly made one full orbit since its discovery by **William Herschel** in 1781 and astronomers had already detected irregularities in its orbit which could in no way be explained by **Newton's law of universal gravitation**.

In 1845 by astronomers **Urbain Le Verrier** in Paris and **John Couch Adams** in Cambridge who also began to calculate the location of the hidden planet.

In 1846 the Royal Society awarded Le Verrier the Copley medal in for his achievement and also awarded Adams the Copley medal in 1848.

However, it wasn't until the beginning of the 20th century that American businessman, author, mathematician, and astronomer **Percival Lowell** theorized the existence of a perturber beyond Neptune which he dubbed Planet X.

As it turns out, Lowell's hypothesis was validated by **Clyde Tombaugh**'s discovery of Pluto in 1930 when Pluto was officially named as the ninth planet in our solar system.

"In 2014, based on similarities of the orbits of a group of recently discovered **extreme trans-Neptunian objects**, astronomers hypothesized the existence of a super-Earth planet, 2 to 15 times the mass of the Earth and beyond 200 AU with possibly a high inclined orbit at some 1,500 AU," Wikipedia states. "In 2016, further work showed this unknown distant planet is likely on an inclined, eccentric orbit that goes no closer than about 200 AU and no farther than about 1,200 AU from the Sun."

"The orbit is predicted to be anti-aligned to the clustered extreme trans-Neptunian objects... Because Pluto is no longer considered a planet by the IAU, this new hypothetical object has become known as **Planet Nine**."

"In August 2006 the International Astronomical Union (IAU) downgraded the status of Pluto to that of "dwarf planet." This means that from now on only the rocky worlds of the inner Solar System and the gas giants of the outer system will be designated as planets. The "inner Solar System" is the region of space that is smaller than the radius of Jupiter's orbit around the sun. It contains the asteroid belt as well as the terrestrial planets, Mercury, Venus, Earth, and Mars. The "gas giants" of course are Jupiter, Saturn, Neptune, and Uranus. So now we have eight planets instead of the nine we used to have," as the **Library of Congress** points out.

This downgrade was made so that the trans-Neptune perturber known as Planet X or the tenth planet would now be referred to as Planet Nine in an attempt to deflect Internet sleuths and researchers from discovering known historical data on Planet X, the real tenth planet, in a last-ditch effort to hide the real truth from the masses.

In the fall of 2015, the New York Times published a piece that questioned: **Is there a Planet X, a 'massive perturber,' hidden beyond Pluto?**

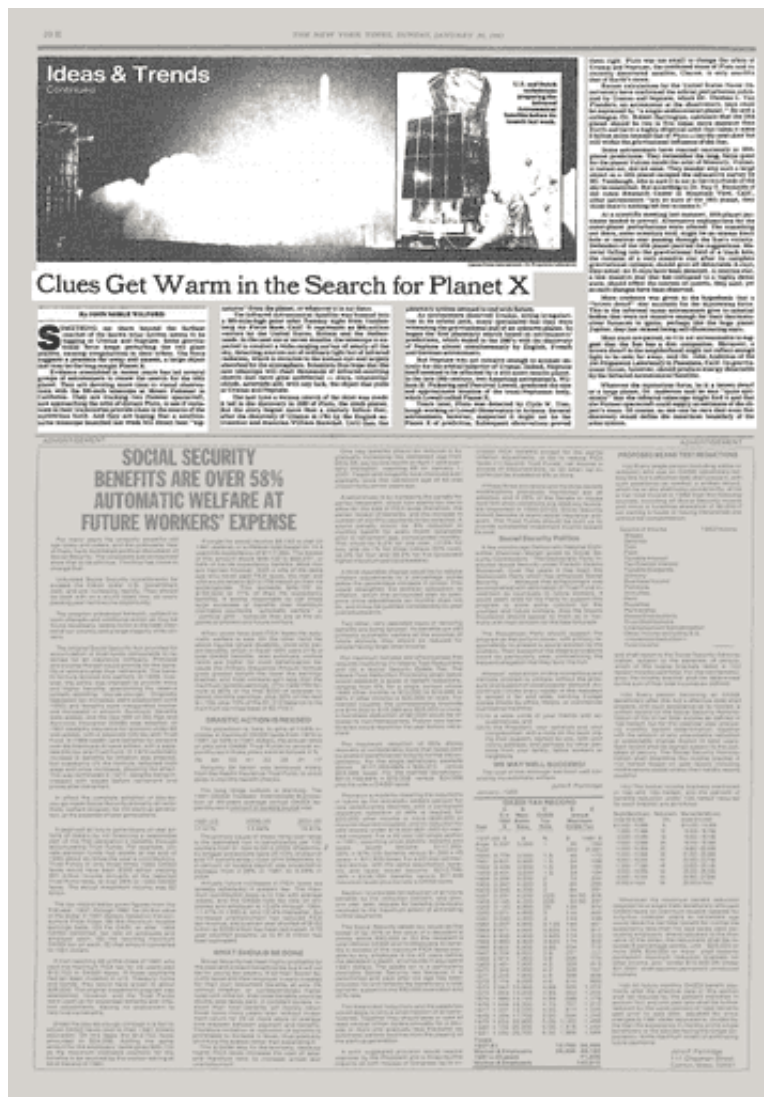

Astonishingly, the report admits that astronomers to date detected about 1,500 icy bodies in the Kuiper Belt” and explains how “a few of them are big enough to rank as ‘dwarf planets.’ And there may be something much bigger lurking out there in the dark... there are tantalizing hints of a hidden planet that’s bigger than Pluto, perhaps even bigger than the Earth — potentially Neptune-sized.”

Additionally, a March 2014 whitepaper authored by Chadwick A. Trujillo and Scott S. Sheppard titled **A Sedna-like body with a perihelion of 80 astronomical units** reveals that “a massive outer Solar System perturber may exist.”

Moreover, the paper’s abstract mentions how the “1,000-kilometre-diameter dwarf planet Sedna was discovered ten years” prior “and was unique in that its closest approach to the Sun (perihelion) is 76 AU, far greater than that of any other Solar System body.”

“Formation models indicate that Sedna could be a link between the Kuiper belt objects and the hypothesized outer Oort cloud at around 10,000 AU from the Sun,” the abstract states. “Here we report the presence of a second Sedna-like object, 2012 VP₁₁₃, whose perihelion is 80 AU. The detection of 2012 VP₁₁₃ confirms that Sedna is not an isolated object; instead, both bodies may be members of the inner Oort cloud, whose objects could outnumber all other dynamically stable populations in the Solar System.”

On January 30, 1983, the New York Times reported in a piece titled **Ideas and trends, clues get warm in the search for Planet X** that “something out there beyond the farthest reaches of the known solar system seems to be tugging at Uranus and Neptune.”

January 30, 1983, Section 4, Page 20, of the New York Times

The bombshell report pointed out how “some gravitational force keeps perturbing the two giant planets, causing irregularities in their orbits” and maintained that “the force suggests a presence far away and unseen, a large object that may be the long-sought Planet X.”

From the report:

Evidence assembled in recent years has led several groups of astronomers to renew the search for the 10th planet. They are devoting more time to visual observations with the 200-inch telescope at Mount Palomar in California. They are tracking two Pioneer spacecraft, now approaching the orbit of distant Pluto, to see if variations in their trajectories provide clues to the source of the mysterious force. And they are hoping that a satellite-borne telescope launched last week will detect heat

“signatures” from the planet, or whatever it is out there.

The Infrared Astronomical Satellite was boosted into a 560-milehigh polar orbit Tuesday night from Vandenberg Air Force Base, Calif. It represents an \$80-million venture by the United States, Britain and the Netherlands. In the next six or seven months, the telescope is expected to conduct a wide-ranging survey of nearly all the sky, detecting sources not of ordinary light but of infrared radiation, which is invisible to the human eye and largely absorbed by the atmosphere. Scientists thus hope that the new telescope will chart thousands of infrared-emitting objects that have gone undetected – stars, interstellar clouds, asteroids and, with any luck, the object that pulls at Uranus and Neptune.

On November 9, 1983, **NASA reported** that the IRAS telescope discovered a new object, possibly a **dark asteroid** or dead comet which raised the alarm bell and prompted the birth of Rex 84.

What is Rex 84?

Readiness Exercise 1984 was and still is a classified drill and scenario that may be used to detain large numbers of U.S. citizens who have been deemed to be “security threats” in the event that the president declares a National Emergency.

Reporter Alfonso Chardy first revealed the plan in the July 5, 1987 edition of the Miami Herald which forced the U.S. government to address its plan for the mass internment of Americans in the event of an impending disaster to combat what the government claimed may be “subversive activities.”

In short, the government scientists, astronomers, and officials knew that an object, possibly a massive dark asteroid, failed comet, or failed brown dwarf star was headed inbound into our solar system posing a threat to our planet and all life on the planet.

From **Wikipedia**:

Existence of a master military contingency plans (of which REX-84 was a part), “**Garden**

Plot” and a similar earlier exercise, “Lantern Spike”, were originally revealed by journalist **Ron Ridenhour**, who summarized his findings in an article in CounterSpy.

Transcripts from the **Iran-Contra** Hearings in 1987 record the following dialogue between Congressman **Jack Brooks**, **Oliver North**’s attorney **Brendan Sullivan** and Senator **Daniel Inouye**, the Democratic Chair of the joint Senate-House Committee:

[Congressman Jack] Brooks: Colonel North, in your work at the N.S.C. were you not assigned, at one time, to work on plans for the continuity of government in the event of a major disaster?

Brendan Sullivan [North’s counsel, agitatedly]: Mr. Chairman?

[Senator Daniel] Inouye: I believe that question touches upon a highly sensitive and classified area so may I request that you not touch upon that?

Brooks: I was particularly concerned, Mr. Chairman, because I read in Miami papers, and several others, that there had been a plan developed, by that same agency, a contingency plan in the event of emergency, that would suspend the American constitution. And I was deeply concerned about it and wondered if that was an area in which he had worked. I believe that it was and I wanted to get his confirmation.

Inouye: May I most respectfully request that that matter not be touched upon at this stage. If we wish to get into this, I’m certain arrangements can be made for an executive session.

Contingency plans by the US Government for rounding up people perceived by the government to be subversive or a threat to civil order have existed for many decades. For example, from 1967 to 1971, the FBI kept a list of over 100,000 people to be rounded up as subversive, dubbed the “ADEX” list.

A video clip from the 1987 Iran-Contra meeting:

The birth of the Federal Emergency Management Agency (FEMA)

With the U.S. government's classified knowledge of the existence of a rather large inbound object into our solar system not visible by the naked eye and only visible with powerful infrared telescopes such as the IRAS came the creation of the Federal Emergency Management Agency also known as FEMA.

From **Wikipedia**:

The Federal Emergency Management Agency (FEMA) is an agency of the United States Department of Homeland Security, initially created by Presidential Reorganization Plan No. 3 of 1978 and implemented by two **Executive Orders** on April 1, 1979. The agency's primary purpose is to coordinate the response to a disaster that has occurred in the United States and that overwhelms the resources of local and state authorities. The governor of the state in which the disaster occurs must declare a **state of emergency** and formally request from the president that FEMA and the federal government respond to the disaster.

...

Executive Order 11921 was an **executive order** approved by **President of the United States Gerald Ford** on June 11, 1976. It amends **Executive Order 11490** of October 28, 1969, which calls for federal agencies to prepare plans for a **state of emergency** that would require "over-all civilian manpower mobilization programs" and related emergency measures.

FEMA has more power than the President of the United States and the Congress and has often been referred to as "the secret government."

A report authored in 1995 by Harry V. Martin with research assistance from David Caul titled **FEMA — The Secret Government** reveals the true power of the agency.

The report makes clear that FEMA "is not an elected body, it does not involve itself in

public disclosures, and it even has a quasi-secret budget in the billions of dollars” and documents how “this government organization has more power than the President of the United States or the Congress, it has the power to suspend laws, move entire populations, arrest and detain citizens without a warrant and hold them without trial, it can seize property, food supplies, transportation systems, and can suspend the Constitution.”

The report goes on to point out how not only is FEMA “the most powerful entity in the United States, but it was not even created under Constitutional law by Congress.”

“It was a product of a Presidential Executive Order. No, it is not the U.S. military nor the Central Intelligence Agency, they are subject to Congress,” Martin wrote. “The organization is called FEMA, which stands for the Federal Emergency Management Agency... originally conceived in the Richard Nixon Administration, it was refined by President Jimmy Carter and given teeth in the Ronald Reagan and George Bush Administrations.”

FEMA had one original concept when it was created, to assure the survivability of the United States government in the event of a nuclear attack on this nation. It was also provided with the task of being a federal coordinating body during times of domestic disasters, such as earthquakes, floods, and hurricanes. Its awesome powers grow under the tutelage of people like Lt. Col. Oliver North and General Richard Secord, the architects on the Iran-Contra scandal and the looting of America’s savings and loan institutions. FEMA has even been given control of the State Defense Forces, a rag-tag, often considered neo-Nazi, civilian army that will substitute for the National Guard, if the Guard is called to duty overseas.

...

FEMA was created in a series of Executive Orders. A Presidential Executive Order, whether Constitutional or not, becomes law simply by its publication in the Federal Registry. Congress is by-passed. Executive Order Number 12148 created the Federal Emergency Management Agency that is to interface with the Department of Defense for civil defense planning and funding. An “emergency czar” was appointed. FEMA has only spent about 6 percent of its budget on national emergencies, the bulk of their funding has been used for the construction of secret

underground facilities to assure continuity of government in case of a major emergency, foreign or domestic. Executive Order Number 12656 appointed the National Security Council as the principal body that should consider emergency powers. This allows the government to increase domestic intelligence and surveillance of U.S. citizens and would restrict the freedom of movement within the United States and grant the government the right to isolate large groups of civilians. The National Guard could be federalized to seal all borders and take control of U.S. air space and all ports of entry.

Additional information from the report:

- EXECUTIVE ORDER 10990 allows the government to take over all modes of transportation and control of highways and seaports
- EXECUTIVE ORDER 10995 allows the government to seize and control the communication media.
- EXECUTIVE ORDER 10997 allows the government to take over all electrical power, gas, petroleum, fuels and minerals
- EXECUTIVE ORDER 10998 allows the government to take over all food resources and farms
- EXECUTIVE ORDER 11000 allows the government to mobilize civilians into work brigades under government supervision.
- EXECUTIVE ORDER 11001 allows the government to take overall health, education and welfare functions.
- EXECUTIVE ORDER 11002 designates the Postmaster General to operate a national registration of all persons.
- EXECUTIVE ORDER 11003 allows the government to take over all airports and aircraft, including commercial aircraft.
- EXECUTIVE ORDER 11004 allows the Housing and Finance Authority to relocate communities, build new housing with public funds, designate areas to be abandoned, and establish new locations for populations
- EXECUTIVE ORDER 11005 allows the government to take over railroads, inland waterways and public storage facilities
- EXECUTIVE ORDER 11051 specifies the responsibility of the Office of Emergency Planning and gives authorization to put all Executive Orders into effect in times of increased international tensions and economic or financial crisis.
- EXECUTIVE ORDER 11310 grants authority to the Department of Justice to enforce the plans set out in Executive Orders, to institute industrial support, to establish a judicial and legislative liaison, to control all aliens, to operate penal and correctional institutions, and to advise and assist the President.
- EXECUTIVE ORDER 11049 assigns emergency preparedness function to federal departments and agencies, consolidating 21 operative Executive Orders issued over a fifteen-year period.
- EXECUTIVE ORDER 11921 allows the Federal Emergency Preparedness Agency to develop plans to establish control over the mechanisms of production and distribution, of energy sources, wages, salaries, credit and the flow of money in U.S. financial institution in any undefined national emergency. It also provides that when a state of emergency is declared by the President, Congress cannot review the action for six months

The Federal Emergency Management Agency has broad powers in every aspect of the nation. General Frank Salzedo, chief of FEMA's Civil Security Division stated in a 1983 conference that he saw FEMA's role as a "new frontier in the protection of individual and governmental leaders from assassination, and of civil and military installations from sabotage and/or attack, as well as prevention of dissident groups from gaining access to

U.S. opinion, or a global audience in times of crisis.”

FEMA’s powers were consolidated by President Carter to incorporate:

- the National Security Act of 1947, which allows for the strategic relocation of industries, services, government and other essential economic activities, and to rationalize the requirements for manpower, resources and production facilities;
- the 1950 Defense Production Act, which gives the President sweeping powers over all aspects of the economy;
- the Act of August 29, 1916, which authorizes the Secretary of the Army, in time of war, to take possession of any transportation system for transporting troops, material, or any other purpose related to the emergency; and
- the International Emergency Economic Powers Act, which enables the President to seize the property of a foreign country or national.

These powers were transferred to FEMA in a sweeping consolidation in 1979.

Black Vault report: Ronald Reagan’s Own Handwriting Emphasizes Importance of “alien threat” Reference in UN Speech, 1987

The following was **reported by T.V. producer John Geenewald Jr** in 2018:

One of the first programs I produced for television was entitled, “UFO Files: UFOs and the White House” which aired on the History Channel. I was the Associate Producer on the show, and I had the pleasure of visiting the Ronald Reagan Library to take a look at his Presidential Records for use in the program.

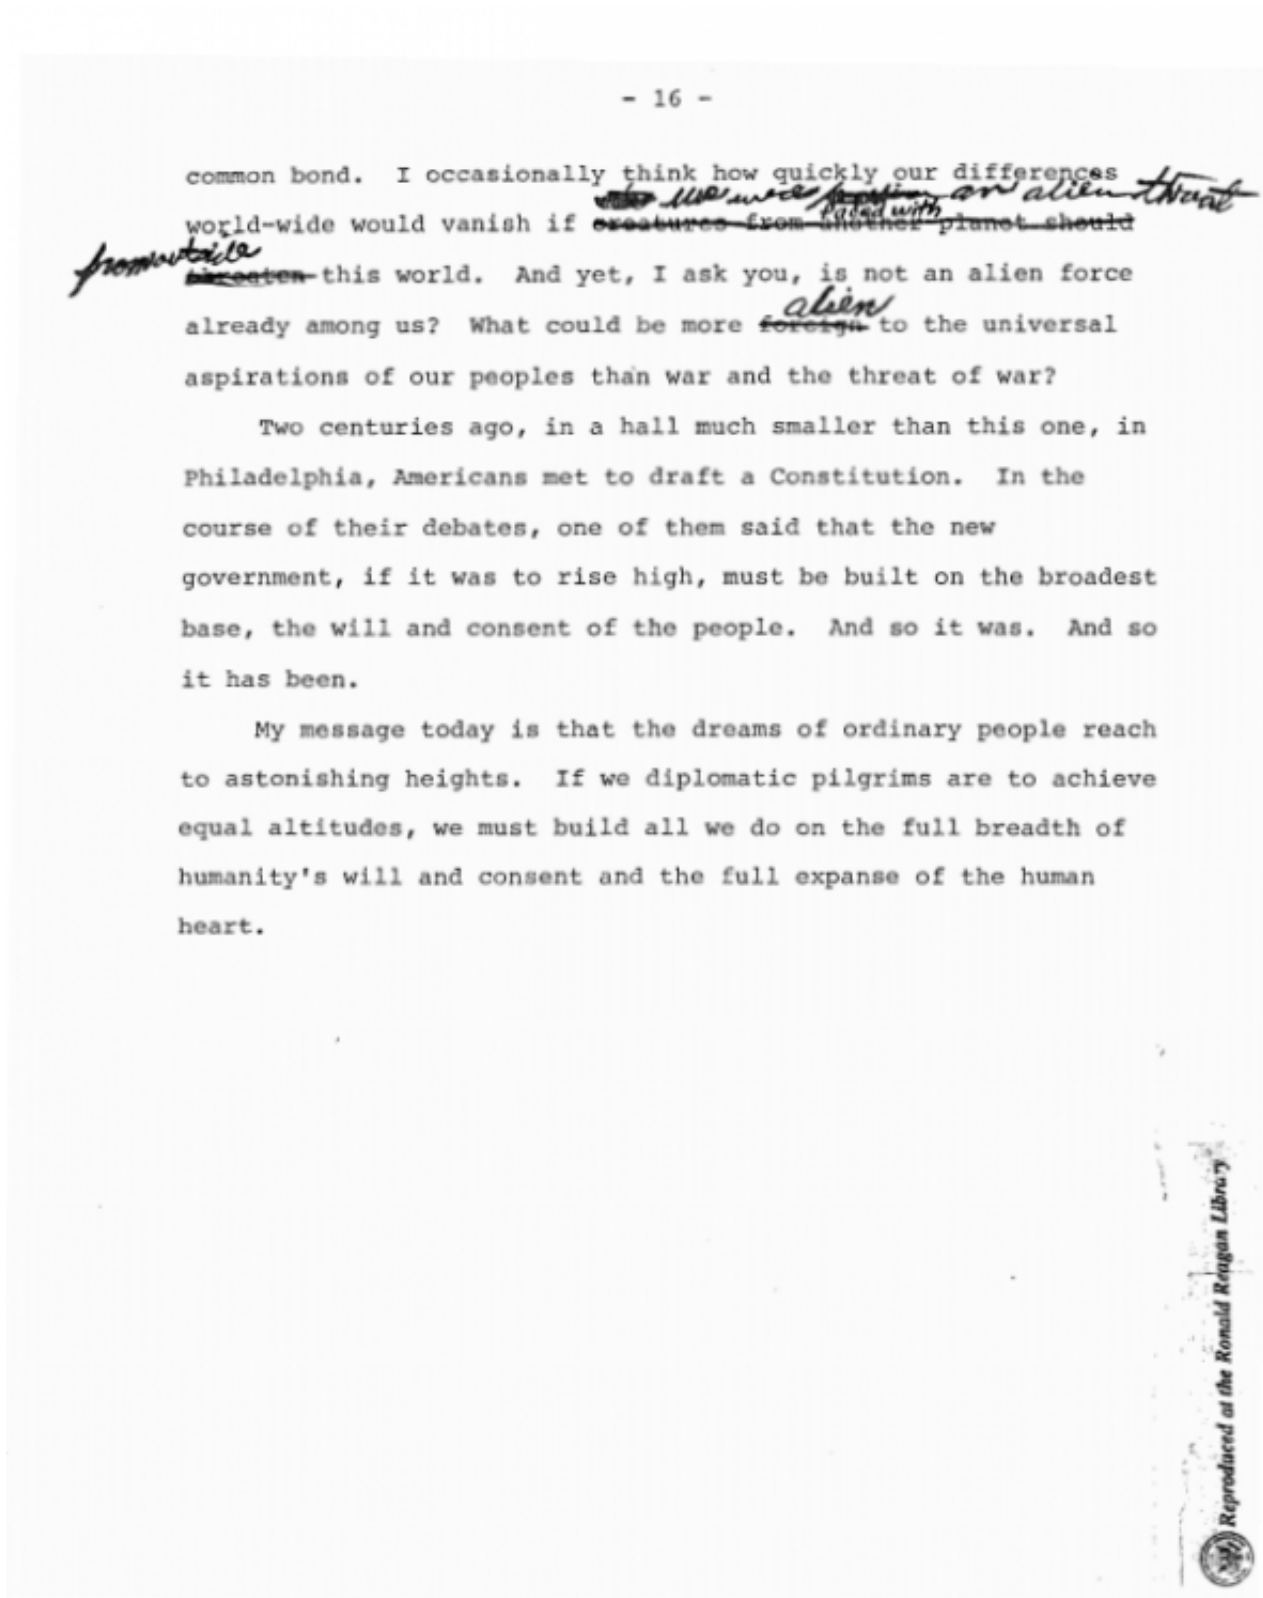

While researching the speech he gave to the United Nations where he referenced “an alien threat,” I made an interesting discovery in his own handwriting making sure what he called his “fantasy” stayed in the speech.

This is a very interesting piece of UFO history, and it clearly shows how important this reference was to Reagan to remain in the speech, despite his speechwriters trying to take it out.

The images of the speech are above, and you can download the PDF here:

Ronald Reagan Speech Notes [4 Pages, 134k]

Are you starting to see the big picture yet?

COVID-19 Emergency Declaration

Via [FEMA.gov](https://www.fema.gov):

On March 13, 2020, the President declared the ongoing Coronavirus Disease 2019 (COVID-19) pandemic of sufficient severity and magnitude to warrant an emergency declaration for all states, tribes, territories, and the District of Columbia pursuant to section 501 (b) of the Robert T. Stafford Disaster Relief and Emergency Assistance Act, 42 U.S.C. 5121-5207 (the “Stafford Act”). State, Territorial, Tribal, local government entities and certain private non-profit (PNP) organizations are eligible to apply for Public Assistance.

In accordance with section 502 of the Stafford Act, eligible emergency protective measures taken to respond to the COVID-19 emergency at the direction or guidance of public health officials’ may be reimbursed under Category B of the agency’s Public Assistance program. FEMA will not duplicate assistance provided by the Department of Health and Human Services (HHS), including the Centers for Disease Control and Prevention, or other federal agencies. This includes necessary emergency protective measures for activities taken in response to the COVID-19 incident. FEMA assistance will be provided at the 75 percent Federal cost-share

This declaration increases federal support to HHS in its role as the lead federal agency for the federal government’s response to COVID-19. The emergency declaration does not impact measures authorized under other Federal statutes.

FEMA assistance will require execution of a FEMA-State/Tribal/Territory Agreement, as appropriate, and execution of an applicable emergency plan. States, Tribal and Territorial governments do not need to request separate emergency declarations to receive FEMA assistance under this nationwide declaration.

FEMA encourages officials to take appropriate actions that are necessary to protect public health and safety pursuant to public health guidance.

White House press briefing on March 13:

“This is only the beginning of what we are really doing and now we’re in a different phase,” President Donald Trump explained at the March 13 press briefing. “We had some very old and obsolete rules [the U.S. Constitution] that we had to live with that worked under certain circumstances but not under mass circumstances”

“They were there for a long time, they were in place for a long time, and we’re breaking them down now and they are very useful for certain instances but not for this,” he said. “To unleash the full power of the federal government of this effort today I am officially declaring a national emergency.”

Ladies and gentlemen, with that statement the president has handed over full control of the U.S. government to FEMA and is now completely powerless. Whether you want to believe it or not, President Donald Trump is now merely a spokesman for the corporation of the United States of America and has no direct power. All power has been transferred to FEMA and the commander of North American Aerospace Defense Command (NORAD) and the United States Northern Command (USNORTHCOM) **General Terrence J. O’Shaughnessy**.

A March 18 report out of Newsweek titled **Exclusive: Inside The Military’s Top Secret Plans If Coronavirus Cripples the Government** confirms O’Shaughnessy’s authority.

From the report:

According to new documents and interviews with military experts, the various plans – codenamed Octagon, Freejack and Zodiac – are the underground laws to ensure government continuity. They are so secret that under these extraordinary plans, “devolution” could circumvent the normal Constitutional provisions for government succession, and military commanders could be placed in control around America.

“We’re in new territory,” says one senior officer, the entire post-9/11 paradigm of emergency planning thrown out the window. The officer jokes, in the kind of

morbid humor characteristic of this slow-moving disaster, that America had better learn who Gen. Terrence J. O'Shaughnessy is.

He is the "combatant commander" for the United States and would in theory be in charge if Washington were eviscerated. That is, until a new civilian leader could be installed.

'We're in territory we've never been in before'

...

What happens, government expert Norman Ornstein asked last week, if so many members of Congress come down with the coronavirus that the legislature cannot meet or cannot muster a quorum? After 9/11, Ornstein and others, alarmed by how little Washington had prepared for such possibilities, created a bipartisan Continuity of Government Commission to examine precisely these and other possibilities.

It has been a two-decade long futile effort, Ornstein says, with Congress uninterested or unable to either pass new laws or create working procedures that would allow emergency and remote operations. The rest of the federal government equally is unprepared to operate if a pandemic were to hit the very people called upon to lead in an emergency. That is why for the first time, other than planning for the aftermath of a nuclear war, extraordinary procedures are being contemplated.

In the past, almost every imagined contingency associated with emergency preparedness has assumed civil and military assistance coming from the outside. One military officer involved in continuity planning calls it a "cavalry" mentality: that military assistance is requested or ordered after local civil authority has been exhausted.

"There might not be an outside," the officer says, asking that she not be named because she is speaking about sensitive matters.

In recognition of the equal vulnerability of military forces, the Pentagon has

instituted unprecedented restrictions on off-base travel. Last Wednesday it restricted most overseas travel for 60 days, and then on Friday issued supplemental domestic guidance that essentially keeps all uniformed personnel on or near military bases. There are exceptions, including travel that is “mission-essential,” the Pentagon says.

Mission essential in this regard applies to the maze of more than a dozen different secret assignments, most of them falling under three larger contingency plans:

- CONPLAN 3400, or the military’s plan for “homeland defense,” if America itself is a battlefield.
- CONPLAN 3500, “defense support of civil authorities,” where the military assists in an emergency short of armed attack on the nation.
- CONPLAN 3600, military operations in the National Capital Region and continuation of government, under which the most-secret plans to support continuity are nested.

All of these plans are the responsibility of U.S. Northern Command (or NORTHCOM), the homeland defense military authority created after 9/11. Air Force General O’Shaughnessy is NORTHCOM’s Colorado Springs-based commander.

So as you can see, the situation is rather real.

President Donald Trump’s March 13 initiation of the Stafford Act activates presidential level national near-earth object preparedness strategy and action plan

The following bombshell report titled **Active presidential level near-earth object preparedness and action plan revealed** was broke worldwide on April 7 by Intellihub founder and editor-in-chief Shepard Ambellas:

The National Near-Earth Object Preparedness Strategy and Action Plan obtained by Intellihub reveals that a presidential level interagency working group for detecting and mitigating the impact of earthbound near-earth objects has been activated and is currently working to detect and mitigate asteroids or comets from striking our planet.

The **official National Science Council plan** named DAMIEN which stands for “Detecting and Mitigating the Impact of Earth-bound Near-Earth Objects” authored in June of 2018 reveals how the U.S. government has been improving “our Nation’s preparedness to address the hazard of NEO impacts by leveraging and enhancing existing national and international assets and adding important capabilities across government.”

The plan comprised by the National Science and Technology Council, the Committee on Homeland and National Security, and the Interagency Working Group for Detecting and Mitigating Impacts of Earth-Bound Near-Earth Objects (DAMIEN) (IWG) “builds on efforts by the National Aeronautics and Space Administration (NASA), Department of Homeland Security (DHS), and Department of Energy (DOE) to detect and characterize the NEO population and to prevent and respond to NEO impacts on Earth” and has been activated through the Stafford Act which **was invoked by President Donald Trump several weeks ago in order to help fight the coronavirus.**

The plan contains “five strategic goals, each supported by a set of strategic objectives and specific associated actions” as follows:

Goal 1: Enhance NEO Detection, Tracking, and Characterization Capabilities: NASA will lead the development of a roadmap for improving national capabilities for NEO detection, tracking, and characterization. Supporting actions will reduce current levels of uncertainty and aid in more accurate modeling and more effective decision-making.

Goal 2: Improve NEO Modeling, Prediction, and Information Integration: Agencies will coordinate the development of validated modeling tools and simulation capabilities that aid in characterizing and mitigating NEO impact risks while streamlining data flows to support effective decision-making.

Goal 3: Develop Technologies for NEO Deflection and Disruption Missions: NASA will lead development of technologies for fast-response NEO reconnaissance missions and timely missions to deflect or disrupt hazardous NEOs. Developing these technologies before an imminent threat arises will strengthen our ability to prevent NEO impact disasters.

Goal 4: Increase International Cooperation on NEO Preparation: Agencies will work to inform and develop international support for addressing global NEO impact risks. International engagement and cooperation will help the Nation to prepare more effectively for a potential NEO impact.

Goal 5: Strengthen and Routinely Exercise NEO Impact Emergency Procedures and Action Protocols: The United States will strengthen and exercise procedures and protocols for assessing NEO threats, communication regarding threats, and response and recovery activities. Coordinated communications and notifications within the U.S. Government and with foreign governments will improve impact emergency preparedness and reduce the physical and economic harm to the Nation.

The plan goes on to point out how “NEO impacts of varying size could have major environmental, economic, and geopolitical consequences detrimental to the United States, even if the impact is outside U.S. territory.”

“The direct effects from a NEO impact depend on its size, composition, and impact speed. Small, rocky NEOs are likely to explode before hitting the ground, resulting in an airburst that could produce a wider area of moderate damage compared with a similarly sized metallic object that would strike the ground and cause heavier, more localized devastation,” the plan reads. “Even small NEOs can have significant destructive effects. For example, on February 15, 2013, an asteroid approximately 20 meters in size created an airburst near Chelyabinsk, Russia, with roughly 20-30 times more energy than that released by the first atomic bombs. It damaged thousands of buildings and injured over a thousand people, mostly due to glass broken by the shock wave (Figure 2). According to current estimates, there are almost 10 million NEOs larger than 20 meters, but they are extremely difficult to detect prior to entering Earth’s atmosphere.”

“Another object approximately 40-60 meters in size exploded over Tunguska, Russia in 1908, with the equivalent of 5-10 megatons of TNT (hundreds of times greater than the first atomic bombs), leveling over 2,000 square kilometers of forest. If a similar event occurred over a major metropolitan area, it could cause millions of casualties (Figure 3). NASA estimates there are over 300,000 objects larger than 40 meters that could pose an impact hazard and would be very challenging to detect more than a few days in

advance.”

Figure 3: Equivalent area of destruction for a Tunguska-sized asteroid over New York City. (OSTP)

“Larger NEOs greater than 140 meters have the potential to inflict severe damage to entire regions or continents. Such objects would strike Earth with a minimum energy of over 60 megatons of TNT, which is more than the most powerful nuclear device ever tested. Fortunately, these are far less common and are easier to detect and track than smaller NEOs. After almost two decades of search, NASA and its partners have cataloged about one-third of the estimated 25,000 NEAs that are at least 140 meters.”

Additionally, the plan states that “objects close to and larger than 1 kilometer can cause damage on a global scale. They can trigger earthquakes, tsunamis, and other secondary effects that extend far beyond the immediate impact area. An asteroid as large as 10 kilometers across is thought to have caused the extinction of the dinosaurs when it struck the Yucatan peninsula some 65 million years ago. NASA is confident that it has discovered and cataloged all near-Earth asteroids large enough to cause significant global damage and determined that they are not on collision courses with Earth, but there is still some chance that large comets from the outer solar system could appear and impact the Earth with warning times as short as a few months.”

Figure 4: Cumulative number of near-Earth asteroids discovered by year since 1980. (OSTP)

So how does the government manage a NEO?

If the situation is right NEOs can be managed and mitigated with enough advance warning.

“Unlike other natural disasters (e.g., hurricanes), once a NEO is detected and tracked we can typically predict many years in advance whether it will cause a devastating impact, and, most importantly, we can potentially prevent impacts when detected with sufficient warning time. A NEO may be deflected via spacecraft systems designed to alter the NEO’s orbit such that it misses the Earth,” as the plan reveals. “When deflection is not practical or advisable, a NEO may be disrupted via spacecraft systems designed to fragment the NEO into smaller pieces that are more likely to miss the Earth or burn up in the atmosphere. The United States must also prepare to manage the consequences of NEO impacts where impact prevention is not feasible, preferable, or successful. Effective emergency procedures can save lives and mitigate damage to critical infrastructure.”

The Trump administration plan

Via the Office of Science and Technology Policy:

The Trump Administration's 2018 National Strategy for Space¹¹ recognizes the NEO hazard, and directs agencies to undertake multilateral efforts that promote U.S. scientific, economic, and security interests, including mitigation of space environmental hazards such as near-Earth objects. National Space Policy¹² directs the NASA Administrator to "pursue capabilities, in cooperation with other departments, agencies, and commercial partners, to detect, track, catalog, and characterize near-Earth objects to reduce the risk of harm to humans from an unexpected impact on our planet."

The United States should lead in establishing a coordinated global approach for tracking and characterizing NEO impact threats, preparing to prevent damaging impacts where possible, and responding to and recovering from NEO impacts. While international cooperation is the most effective way to manage NEO impact risks, the United States should also be prepared to act independently through all phases that may occur during an impact scenario (Figure 5) to protect and preserve America's interests.

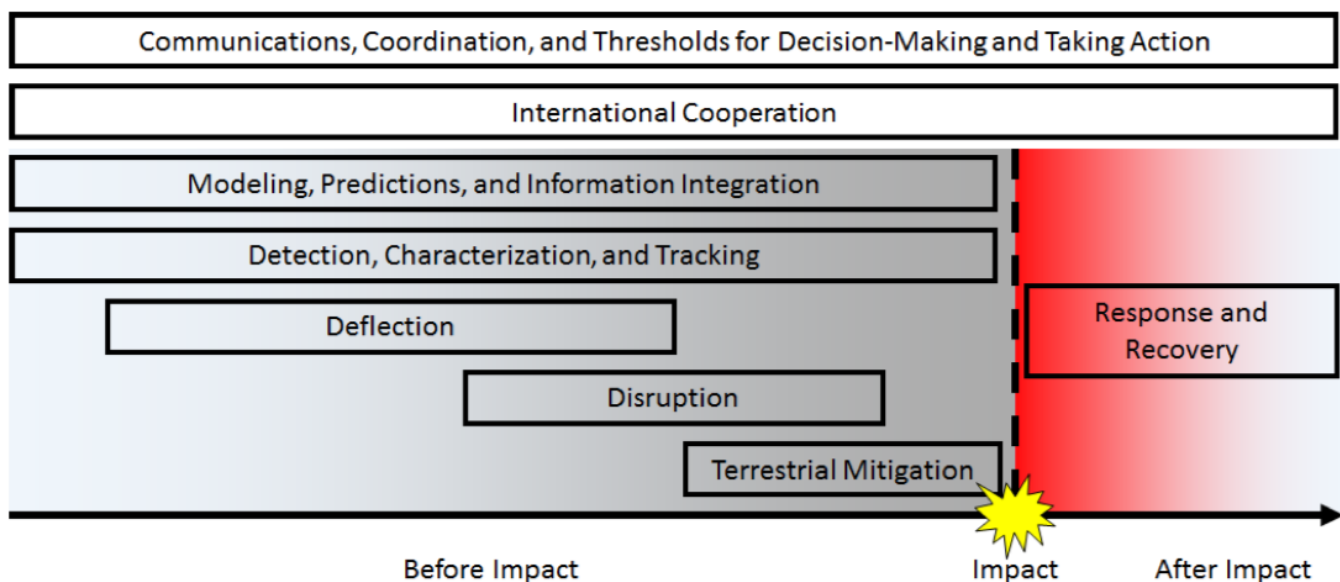

Figure 5: Illustrative timeline of the potential phases of operations in a NEO threat scenario. (OSTP)

Recognizing the lack of a whole-of-government or international strategy for

addressing NEO hazards, the Committee on Homeland and National Security within the National Science and Technology Council (NSTC) established an Interagency Working Group (IWG) for Detecting and Mitigating the Impact of Earth-bound Near-Earth Objects (DAMIEN). The DAMIEN-IWG developed this Strategy and Action Plan to enhance national preparedness over the next decade for the hazard of NEO impacts. Its primary role is to help organize and coordinate NEO-related efforts within agencies, with a particular focus on efforts that are already existing and resourced.

Goal 3: Develop Technologies for NEO Deflection and Disruption Missions

Via OSTP:

Preparing to respond effectively to a NEO impact threat scenario includes developing capabilities for both deflection and disruption. There is much that is not known about the orbits, size, and material composition of many NEOs, and it is essential to account for these uncertainties when developing and utilizing technologies for impact prevention. For example, multiple technologies may be suitable for preventing NEO impacts that are predicted well in advance, while disruption via nuclear explosive device may be the only feasible option for NEOs that are very large or come with short warning time. Observing NEOs over many years (as outlined in Goal 1) will improve the understanding of their orbits and future trajectories, and should also improve our understanding of their size and composition, which would assist in planning for deflection or disruption space mission campaigns.

The strategic objectives to develop technologies for NEO deflection and disruption missions are:

- Develop technologies and designs for rapid-response NEO reconnaissance missions
 - Develop technologies and designs for NEO deflection and disruption missions
- Develop technologies and designs for rapid-response NEO reconnaissance missions. An effective deflection or disruption mission will most likely require more detailed and accurate information about the incoming NEO than existing and planned remote observational capabilities can provide. A capability to rapidly launch a spacecraft to rendezvous with or fly by the NEO and perform reconnaissance is the only clear way to meet this need. A rapid reconnaissance mission would ideally provide up-close imagery, compositional information, and mass measurements.³¹ Assess technologies and concepts for rapid-response NEO reconnaissance missions. This assessment should include dedicated reconnaissance via spacecraft flyby or rendezvous, as well as mission concepts in which the reconnaissance spacecraft could also carry out deflection or disruption. The assessment should consider both commercial-off-the-shelf parts and new hardware development. [Short term; NASA]
2. 3.2 Evaluate the capabilities of current and projected domestic and international launch vehicle infrastructure to support planetary defense missions. This analysis includes considering both rapid-response reconnaissance and deflection/disruption missions, accounting for integration and testing processes, and recommending processes for accomplishing rapid response planetary defense space-lift. [Short term; NASA/LSP, Air Force Space Command]
3. 3.3 Create plans for the development, testing, and implementation of NEO reconnaissance mission systems. These plans should lead to establishment of operational NEO reconnaissance capabilities, including rapid-response. Planning could include developing a system to automatically calculate possible trajectories for planetary defense spacecraft to reach potentially hazardous NEOs. [Short term; NASA]

Develop technologies and designs for NEO deflection and disruption missions

The United States should develop and validate technologies and techniques for deflecting and disrupting NEOs of varying physical properties before the need arises to deploy them in an actual threat scenario. For most NEO threat scenarios, Earth impact prevention capabilities should include the ability to rapidly reach the NEO, conduct necessary rendezvous and proximity operations, and deploy deflection/disruption technologies. Additionally, deploying an instrumented means of measuring the deflection over time can provide valuable assurance of mission success and critical post-mission situational awareness. Where practical, we should establish confidence through a real-world demonstration—consistent with all U.S. treaty obligations and international commitments—of the deflection or disruption technique, potentially as a part of a mission or program with broader scientific and exploration objectives.

4. 3.4 Identify, assess the readiness of, estimate in the costs of, and propose development paths for key technologies required by NEO impact prevention concepts. This assessment should include the most mature in-space concepts—kinetic impactors,¹⁴ nuclear devices, and gravity tractors¹⁵ for deflection, and nuclear devices for disruption¹⁶—as well as less mature NEO impact prevention methods. Technology assessments should consider contemporary work, including potential synergies with relevant private industry interests (e.g., asteroid mining). They should also consider NEO impact scenarios that may have received insufficient attention thus far (e.g., binary asteroids, high-speed comets). [Short term; NASA, NNSA, DoD]
5. 3.5 Perform a risk analysis on planetary defense mission success under varying assumptions and circumstances. This effort will address current deficiencies in understanding how rapidly the United States can deploy planetary defense missions while maintaining acceptable reliability and mission success probability, and with sufficient redundancy. [Medium term; NASA]
6. 3.6 Develop preliminary mission designs for NEO deflection mission campaigns. This action includes preliminary designs for a gravity tractor NEO deflection mission campaign, and for a kinetic impactor mission campaign in which the spacecraft is capable of either functioning as a kinetic impactor or delivering a nuclear explosive device. For the latter case, the spacecraft would contain all systems necessary to carry and safely employ a nuclear explosive device but would carry a mass simulator with appropriate interfaces in place of an actual nuclear device. Designs should include reconnaissance spacecraft and methods to measure the achieved deflection. [Medium term; NASA, NNSA]
7. 3.7 Conduct a series of flight demonstrations to validate NEO deflection and disruption system concepts. These flight demonstrations would focus on harmless NEOs to test and validate deflection/disruption system concepts and identify design issues for correction. Any flight demonstrations relevant to nuclear explosive techniques would not incorporate an actual nuclear device, or involve any nuclear explosive testing. Results would inform decision-making processes during an actual NEO threat scenario. Thorough flight testing of a deflection/disruption system prior to an actual planetary defense mission would substantially decrease the risk of mission failure. [Long term; NASA]

To boot the plan suggests bringing together foreign governments and informing them of “the need for a comprehensive and coordinated approach to preparing for a NEO event.”

ELE coming? World's populace brought into lockdown ahead of anticipated, possible, April 29 extinction-level event

Do governments around the world know something we don't? Did they lock down the world in preparation for April 29 deep impact?

Hundreds of governments around the world have brought their citizenry into total and complete martial law-style lockdown ahead of an anticipated and possible extinction-level event (ELE) of biblical proportions.

In the name of "the invisible enemy" known as COVID-19 over one half of the world's population remains locked into their homes as a 3.5-mile wide planetary killer asteroid 1998 OR2 and a comet C/2019 Y4 (ATLAS) half the size of the Sun and 5 times the size of Jupiter make their close approach to earth on April 29.

And if that is not enough, the same university that tracks the number of COVID-19 cases worldwide on a live interactive map is also the same university that diverts the trajectory of near-earth objects (NEO) asteroids away from the earth, as I reported in my latest bombshell report titled **World locked down, braced for impact? Johns Hopkins University controls COVID-19 case map and trajectory of NEO asteroids, comets.**

As of last year, "NASA has detected that one of the largest known potentially hazardous asteroids will approach Earth less than a year from now. Depending on several factors in space, the approaching planet-killer asteroid could end up on a path straight to Earth," **IB Times** reports.

Close approach on April 29

From IB Times: (emphasis mine)

The approaching asteroid has been identified by the space agency as **1998 OR2**. It was first discovered on June 30, 1987, and is known to frequently approach the orbits of Earth and Jupiter. It was classified as an Amor asteroid, which means its orbit covers both the Sun and Earth.

As indicated by NASA's asteroid tracking department, which is known as the **Center for Near Earth Object Studies** (CNEOS), 1998 OR2 has an estimated diameter of

13,500 feet. Given its size, the asteroid is longer than the National Mall in Washington D.C., which stretches from the Capitol Building to the Lincoln Memorial.

According to CNEOS, 1998 OR2 will fly past Earth on April 29, 2020, at 5:56 am EDT....

Asteroid orbital elements and physical perimeters:

The NEO asteroid's variable data reveals a direct strike with Earth is possible.

Several days ago a meteor the size of a fist impacted the Earth in Nigeria and the event went unreported for the most part.

Apparently a meteorite the size of a fist impacted Earth in Nigeria yesterday at 53K mph. It left a rather large crater. Why didn't the media report this?

[@FoxNews](#) [@CNN](#) [@MSNBC#meteor](#) pic.twitter.com/dQyHNs31OA

— Silence_Is_Golden (@martin_r_taylor) [April 1, 2020](#)

As a caveat...

According to a [press release](#) issued by the John Hopkins Physics Laboratory on Nov. 6, 2019: “The Johns Hopkins Applied Physics Laboratory (APL) team building NASA’s first planetary defense test mission — the [Double Asteroid Redirection Test \(DART\)](#) — has completed two key mission reviews that bring DART steps closer to the challenging task of diverting an asteroid.”

“DART will be the first mission to demonstrate asteroid deflection using a kinetic impactor technique. This will involve autonomously piloting the APL-built spacecraft into an asteroid at roughly 4 miles (or about 6.5 kilometers) per second. The ultimate objective is to measure the resulting change in orbit of the small moon Didymos B around the

primary asteroid, Didymos A. The asteroid system will be nearly 7 million miles (11 million kilometers) from Earth when DART arrives, and no threat to the planet, but its proximity makes it ideal for collecting ground-based observations before and after impact,” the press release states.

Moreover, the statement says it’s “all systems go” in April of 2020 meaning that the project will “move forward.”

It gets much worse. NASA says two asteroids will intersect earth’s orbit on Wednesday, April 15, 2020, and could possibly be large enough to destroy a large town

2020 GH2 crosses earth's orbit on April 15, 2020. (NASA JPL)

From **IB Times**:

KEY POINTS

- NASA detected two asteroids approaching Earth
- Both asteroids have Earth-crossing orbits
- One of the asteroids is big enough to cause an impact event

NASA's automated asteroid tracking system has detected two asteroids that are expected to approach Earth On Wednesday. According to the data collected by the agency's Center for Near-Earth Object Studies (CNEOS), the approaching asteroids have natural orbits that intersect Earth's path.

The asteroid that will first approach Earth on April 15 has been identified as **2020 FX3**. As indicated in CNEOS' database, this asteroid has an estimated diameter of 295 feet, making it almost as big as the Statue of Liberty.

According to CNEOS, 2020 FX3 is currently traveling across space towards Earth at an average speed of almost 23,000 miles per hour.

Trailing behind 2020 FX3 is an asteroid known as **2020 GH2**. Compared to 2020 FX3, 2020 GH2 is a much smaller asteroid. As noted by CNEOS, this space rock measures about 98 feet wide. It is currently moving through the Solar System at an average velocity of over 19,000 miles per hour.

According to NASA, both 2020 FX3 and 2020 GH2 are classified as Apollo asteroid. This means that these two space rocks have natural orbits that cross Earth's path as it travels around the Sun.

Earth-crossing asteroids are one of the most dangerous types due to their capability of directly colliding with the planet. If 2020 FX3 hits Earth, it could cause an impact event on the ground.

Based on its size and potential impact velocity, the blast from the asteroid's ground explosion could be powerful enough to destroy a relatively large area such as a town.

President Trump cryptically admits he is no longer President of the United States after empowering FEMA due to COVID-19 National Emergency declaration

President Donald Trump cryptically admitted during an April 10 White House press briefing that he is no longer the president of the American people.

“The American people have been so disciplined it has been my honor to be their president,” he said. “It has been my great honor to have been [past tense] their president.”

“I have a big decision coming up and I only hope to God it’s the right decision,” the president explained. “But it will be based on, um, the input of a lot of very talented people, very smart people, and people that love our country.”

He has a big decision to make. The president will have to decide whether he will tell the American people the truth or hide it from them to prevent panic. What to do? That’s a tough one.

Secretary of State Mike Pompeo admits “we are in a live exercise”

“This is not about retribution this matter is going forward,” Secretary of Defense Mike Pompeo said during a March 22 White House press briefing on COVID-19. “We are in a live exercise here to get this right.”

It appears Pompeo may have been referring to NASA’s Project DART program which will likely be used for the first time in an attempt to mitigate a near-earth-earthbound object during a classified live real-time exercise.

Withal, we can not forget about the potential that Planet X is approaching.

Planet X for dummies

I authored an article in June of 2014 titled **Planet X for dummies** which provide general information on the subject. The information is a must-read and goes as follows:

So why hide Planet X from the public?

“We believe that planet X is a brown dwarf star called Wormwood”, said Dr. Jaysen Rand Ph.D., in a one of a kind interview conducted by Intellihub’s editor-in-chief.

On August 6, 2010, Intellihub’s Shepard Ambellas interviewed one of the world’s foremost researchers of Planet X a.k.a. Nibiru which has become a topic of great interest amongst many people as earth proves to once again be in peril once again which is also reflected by current earth changes and weather patterns.

Planet X 101

“In November of 1983 NASA’s IRAS infrared telescope discovered an unbelievably huge, massive, what looked like a slowly burning star, a big object, headed right toward our solar system from the region of Orion”, Dr. Jaysen Rand, researcher and author of the book **Return of Planet X**, stated in his opening remarks during **the historical 2010 interview** in which the doctor pointed out how openly and well announced the discovery actually was.

However, like clockwork, 24-hours later the media was completely silent on the matter and you heard not even a peep as national security protocols were implemented at the highest levels of the government and throughout the media. From then on, there would be almost a complete informational blackout on the subject.

“The public didn’t name Planet X, the government did [...] that’s the first rule of Planet X 101”, Rand pointed out passionately. Rand then made mention of a 1984 U.S. News and World Report article which revealed yet another clue to what NASA found. “They named it a **brown dwarf star**“, he explained.

Jumping back in time and space 4–5 billion–

years ago

“There were twelve original planets [in our solar system] just like Sitchin described [...] it’s also confirmed in prophecies, cave paintings, in Vatican information, in a thousand sources different sources we cited in our book [...] there is evidence that every 3600-4000-years some unbelievably huge catastrophic event strikes the earth that we’ve traced back 500,000-years in time showing when each of these 3600-4000-years periods began and ended [...] And the very last one was in 1447 BCE, before the common era”, Rand stated continuing to talk about similarities between the Bible’s exodus and the Book of Revelations, chapter 8, book 11. Rand pointed out to Ambellas during the broadcast, “We believe that this is a real phenomenon event”

Ambellas then interjected, pointing out how the **Kolbrin Bible** talks of “the destroyer”.

Manuscripts 3:4 reads: “When blood drops upon the Earth, the Destroyer will appear, and mountains will open up and belch forth fire and ashes. Trees will be destroyed and all living things engulfed. Waters will be swallowed up by the land, and seas will boil.”

And Manuscript 3:6 reads: “The people will scatter in madness. They will hear the trumpet and battle-cry of the DESTROYER and will seek refuge within dens in the Earth. Terror will eat away their hearts, and their courage will flow from them like water from a broken pitcher. They will be eaten up in the flames of wrath and consumed by the breath of the DESTROYER.”

So many texts throughout history document, what is coming.

What if the book of Revelations isn’t a book of the past but is rather a documentation of what has already happened, time and time again, every 3600-4000-years? What if the next passing is soon? These are the type of questions I myself and others are now asking.

“There are bones filled up into the back of caves at high elevations”, Ambellas pointed out on the show, dovetailing with Lucas’ theory of why dinosaur bones washed up into large bone piles at the base of the Colorado mountains. Likely the close passing of a massive celestial object, like a brown dwarf star, could create such havoc for the inhabitants of the earth by essentially swashing the waters about the face of the planet with nearly every

pass as documented in biblical texts such as the story of the Great Flood.

All of this history may have been caused by the close passing of Planet X during each cycle. Real events, with real science behind them.

The orbit of X

Renowned researcher and author Zecharia Sitchin claims that Planet X flies through space in a highly elliptical orbit and approaches earth from the south on an angular plane entering our system in retrograde eventually slingshotting around the backside of the sun before exiting back out of our solar system every 3600-years. The entire destructive cycle lasts approximately 27 months. (i.e. 13 months inbound and 13 months outbound)

It has also been said that you can only see the brown dwarf star approaching low on the horizon from a vantage point in the earth's southern hemisphere which makes spotting the planet with the naked eye extremely difficult.

A [Wikipedia](#) entry on Zecharia Sitchin reads:

According to Sitchin's interpretation of Mesopotamian iconography and symbology, outlined in his 1976 book *The 12th Planet* and its sequels, there is an undiscovered planet beyond Neptune that follows a long, elliptical orbit, reaching the inner solar system roughly every 3,600 years. This planet is called Nibiru (although Jupiter was the planet associated with the god Marduk in Babylonian cosmology). According to Sitchin, Nibiru (whose name was replaced with MARDUK in original legends by the Babylonian ruler of the same name in an attempt to co-opt the creation for himself, leading to some confusion among readers) collided catastrophically with Tiamat (a goddess in the Babylonian creation myth the *Enûma Eliš*), which he considers to be another planet once located between Mars and Jupiter. This collision supposedly formed the planet Earth, the asteroid belt, and the comets. Sitchin states that when struck by one of planet Nibiru's moons, Tiamat split in two, and then on a second pass Nibiru itself struck the broken fragments and one half of Tiamat became the asteroid belt. The second half, struck again by one of Nibiru's moons, was pushed into a new orbit and became today's planet Earth.

Over the last few years countless people including scientists, top scholars, and universities, in conjunction with other **peer-reviewed studies**, have documented the fact that the moon, sun, and earth are not in their proper positions as things could seemingly be unwinding in our solar system.

There has been a change in weather, seasons, tides, volcanic activity, tectonic activity and more as tornadoes are now even striking as early as June.

For years governments have been aware of an approaching celestial body (a brown dwarf star) and it's 3600-year cycle of devastation as outlined in ancient Sumerian cylinder seals and other ancient documents.

An excerpt from the **Washington Post** article dated December 30, 1983, page A1 – reads;

A heavenly body possibly as large as the giant planet Jupiter and possibly so close to Earth that it would be part of this solar system has been found in the direction of the constellation Orion by an orbiting telescope aboard the U.S. infrared astronomical satellite.

So mysterious is the object that astronomers do not know if it is a planet, a giant comet, a nearby “protostar” that never got hot enough to become a star, a distant galaxy so young that it is still in the process of forming its first stars or a galaxy so shrouded in dust that none of the light cast by its stars ever gets through.

“All I can tell you is that we don’t know what it is,” Dr. Gerry Neugebauer, IRAS chief scientist for California’s Jet Propulsion Laboratory and director of the Palomar Observatory for the California Institute of Technology, said in an interview.

Don’t forget, the incursion into Iraq in 2003 was actually named Operation Planet x. “During **Operation Iraqi Freedom**, Operation Planet X was a **US Army** mechanized raid conducted on a village near **Ad Dawr** and **Al Dur**, 11 miles (18 km) north of **Tikrit** on the night of 15 May 2003 by elements of the **1st Brigade Combat Team, U.S. 4th Infantry Division** and **Task Force Ironhorse** in search of **Ba’ath** party members and militants,” an excerpt from **Wikipedia states**.

Moreover, in 2011 secretive and **coded military drills** were run in preparation for what's coming. In fact, the ELENIN drill involved testing a massive worldwide network that would connect and go live in realtime in the event a major worldly disaster were to take place. To boot, agencies such as NASA have already prepped their on and off-world personnel for such an event. The following video serves as evidence of this.

Not to mention, it has already been documented by astronomers that the orbital patterns and tilt of the moon have changed, likely signifying the presence of a hidden celestial object. An excerpt from a peer-reviewed paper by Lorenzo Lorio filed at Cornell Universities library reads:

A recent analysis of a Lunar Laser Ranging (LLR) data record spanning 38.7 yr revealed an anomalous increase of the eccentricity of the lunar orbit amounting to $de/dt_{\text{meas}} = (9 \pm 3) 10^{-12} \text{ yr}^{-1}$. The present-day models of the dissipative phenomena occurring in the interiors of both the Earth and the Moon are not able to explain it.

[...]

On the other hand, the values for the physical and orbital parameters of such a hypothetical body required to obtain the right order of magnitude for de/dt are completely unrealistic. Moreover, they are in neat disagreement with both the most recent theoretical scenarios envisaging the existence of a distant, planetary-sized body.

Ladies and gentlemen, a Cornell University astronomer has just admitted in the above statement that they themselves are now looking into the possibility of Planet X type scenarios being real, as they themselves are dumbfounded by the data.

So is it possible NASA is hiding something?

What about all of the newly discovered planets in our solar system which have been quietly announced?

Dwarf planet near asteroid belt may contain more freshwater than earth and even some life

While Ceres may not be Plant X per se, it lets us as humans know there is a lot more going on out there in which we don't really know yet. Interestingly enough, the newly discovered planet may contain life.

Ceres is touted as the only dwarf planet in the solar system made up of about one-third the mass of the asteroid belt itself and has been shown by a European Space Agency research team to harbor vast supplies of fresh water which is the key to life.

While it is currently not yet known how the water is distributed onto or inside the planet some speculate ice volcanoes could be a source.

The NASA spacecraft "Dawn" arrived at Ceres in February 2015 to gather more information pertaining to the water and life on the surface of the tiny planet.

The **Raw Story** reported:

"We've got a spacecraft on the way to Ceres, so we don't have to wait long before getting more context on this intriguing result, right from the source itself," said Carol Raymond, deputy principal investigator for Dawn at NASA's Jet Propulsion Laboratory. "Dawn will map the geology and chemistry of the surface in high-resolution, revealing the processes that drive the outgassing activity."

Dawn, which launched in 2007, had previously orbited the protoplanet Vesta, the second-largest object in the asteroid belt between Mars and Jupiter that's littered with rock left over from the formation of the solar system some 4.6 billion years ago.

The discovery puts Ceres in a special class of solar system objects with active water plumes, a key ingredient for life, and includes Jupiter's moon Europa – which may have an ocean beneath thick surface ice – and Saturn's moon Enceladus, where water jets have been spotted on the surface.

So why would NASA spend so much money, time and effort to visit such a world? Did they already suspect the possibility that Ceres houses water and possibly life?

After all, Ceres was named after “a **goddess of agriculture, grain crops**, fertility, and motherly relationships”, according to Wikipedia. It doesn’t get more obvious than that.

Rest assured secret factions within the U.S. government and NASA already knew that water and possibly life exists on Ceres which is what likely prompted NASA’s mission in the first place. And you better believe that if NASA’s public information on Ceres is limited so is their information on Planet X. Such information would remain top-secret, only to be shared with the White House per mandate at a later date which is why President Trump told Secretary of Defense Mike Pompeo on March 22, 2020, during a White House press briefing: “I wished you would have told me.”

So why hide this information from the public?

“Typically you can’t press release this stuff out to the public, because if you did society would collapse”, said Lucas, the founder of the website RabbitHole2.com, who was sitting shotgun during the bombshell 2010 broadcast with Shepard Ambellas and Dr, Jaysen Rand, likely hitting the nail right on the head.

Society simply could not take this information being released on CNN and all of the other mainstream networks all at once. It would be too chaotic and pandemonium would ensue.

In fact, this is the real reason that Ronald Reagan’s **Readiness Exercise 1984 (REX84)** was designed for, not for a mass exodus of illegal aliens as the official plan reads.

This is the reason that over 700 FEMA camps and secret detention facilities have also been erected all across the U.S. and quite possibly be the reason the entire Continuity of Government (COG) program was started in the first place as Ambellas pointed out on air back in 2010.

“What do you need to be one to four miles beneath the surface for? Ambellas questioned, bringing up the issue of underground bases and governments’ need for them worldwide.

As a follow-up to the broadcast, Ambellas did **an independent investigation of the Denver International Airport underground facility** which Ambellas demonstrated is part of the Continuity of Government (COG) program.

For the first time, a whistle-blower from within the Denver International Airport confirms the existence of a massive deep underground military facility located on the airport’s property.

The Denver International Airport (DIA), nestled on a vast 53 square mile complex, owned and operated by the City of Denver, is the largest airport in the United States, in terms of landmass garnered, and the second largest airport in the world to Saudi Arabia’s King Fahd International Airport.

The airport serves over 50 million passengers a year and is now incorporating a massive new project called “Airport City” an **aerotropolis** which has been presented publicly by the Mayor of Denver, Michael Hancock, who respectively declined an interview with Intellihub News.

However, interestingly, the new aerotropolis will incorporate an expansive business district with new lodging as well as an agricultural and technical district within the confines of the airport property to attract more revenue to Denver’s growing economy. In fact, between the planned aerotropolis and Colorado’s booming marijuana industry, DIA just might be the next biggest thing since sliced bread.

The concept is innovative, a first for an airport in America, and is likely to become the envy of other airports around the world.

In fact, according to Airport City Denver’s official website:

In 2010, DIA and the City and County of Denver took a major step in DIA’s evolution to fulfill its gateway role by inviting firms from around the world to submit proposals to assist DIA in planning, assessing and creating an Airport City at DIA as

the core of and competitive accelerator for the emerging Denver aerotropolis. Later that year, DIA selected **MXD Development Strategists** (MXD) and its collaborative team including Design Workshop, CH2M Hill, Dr. John Kasarda, Integrity Parking, Transcore and Ambient Energy to prepare the Denver International Airport City Development Strategy.

However, local residents and others have been questioning the new construction in and around the airport property as several red flags have been raised. In fact, since the first construction phases of the airport started in the early 1990's, there have been several indicators that something else may be taking place on or under the grounds of the 53 square mile complex.

The Facility

Some speculate that a deep underground military facility, part of the Continuity of Government (COG) program exists on the site. A massive underground city that will be used by our government in the event that Washington or our central government's command hub is compromised. According to some investigative reports, including one headed up by the former Governor of Minnesota, Jesse Ventura, the underground city that lies beneath the airport quite possibly connects to other deep underground military installations throughout the country.

A source of mine within the airport confirmed for the first time astonishing information regarding the underground facility, providing details unknown to airport staff and the general public until now.

The following are details regarding a deep underground military installation located on the grounds of the DIA as provided by my source:

- Level 1 of the airport is inset into the ground to protect from vibrations coming from underneath. The baseboard characteristics lead to this technical design. The employees have been told the reason for this is to protect from vibrations from the public train that leads back and forth to all concourses, A, B, and C
- The airport's gate and door numbers correspond to emergency action and response plans that indicate specific details to people "in the know".

- The design of the airport is built to throw people off as levels are labeled differently on each in some cases and grading changes make it difficult to pinpoint your actual elevation. This was a security feature added by the designers.
- Due to lawsuits (or potential staged events) in the “United Airlines, Inc.” section of one of the basement levels at DIA, an infectious bio-hazard or fungal outbreak has instigated quarantined off areas of the underground, as they are now inaccessible to the airport staff and personnel. The quarantined section of the underground was confirmed by the source to be located in Concourse B’s East side lower levels.
- The landfill located off of Tower Rd. two miles west of the Jeppesen Terminal was added onto in the early 2000’s despite the **airport’s appeal to the District Court against the landfill** in 2002, claiming it was an FAA safety hazard. The landfill has a functioning element to it but is “mocked-up” to look like a landfill hidden in plain sight.
- There is a militarized intermediary entrance located in the “United Airlines” section of the underground. The actual door number was reveled by my source with great hesitation. The actual door code is “BE64B” unknown until now to the general public.
- A swift door will also allow access to the intermediary entrance of the facility if you have the proper “speed-pass” clearance on a Department of Defense (DOD) level. This door was also a secret to the general public until now. The actual door number is “T-47 M” located on the level 4 exterior. Update: Airport Staff, “I just went into T47-M... nothing goes down, no steps, no elevator”.
- The dirt in parts of the train tunnels looks unnatural, and “if anyone steps on it they know”, said my source.
- Gates can “lock-down” certain sections of the airport in the event of an emergency.
- A nearly 3-mile long tunnel heads out from the intermediary entrance “BE64B”, to a full-blown Department of Defense (DOD) sanctioned militarized entrance nestled in a set of 5 buildings 120’ beneath the surface located Northeast of the Jeppesen Terminal.
- All VIP activity typically originates under the Northwest section of “Concourse C”

The information provided by the whistleblower does indeed beg the following question. Does the DOD have any ties to areas of the airport owned and (or) operated by domestics airline carriers?

Department of Defense Ties To Domestic Airline Carriers

New information uncovered by dev-test.intellihub.com investigators concludes that, yes indeed the DOD has ties to a commercial airline carrier that operates out of the Denver International Airport.

Documents requested by a Freedom of Information Act (FOIA) request by the **Investigative Report Workshop** in 2004 reveal that “United Airlines, Inc” is involved in a DOD “Air Transportation Program” likely connected to COG. This contract would allow United Airlines to fly VIPs, sitting Senators, Congressmen, and top elected officials including Head’s of State to-and-fro the main COG hub located on DIA grounds.

According to the Investigative Report Workshop, “The Department of Defense audits commercial air carriers it contracts with to fly DOD employees. The Workshop and PBS FRONTLINE sent an FOIA request to learn about United Airline’s maintenance procedures. Last year, we had sent the same request for another company and the audits proved to be very informative. This time, however, we received about 94 mostly blank pages.”

The Dirt Came From Somewhere

According to my source from inside, a massive pile of dirt was added to an existing landfill in the area despite the FAA’s request that it was dangerous to travelers and could pose a radar issue causing a potential disaster. This addition to that landfill was pressed hard and was supposed to take place over a 40-60 year period, but instead took place over the course of about 4 years. The pile of dirt, which is masked as a landfill in-plain-sight, now exceeds 300’ in altitude.

An excerpt from the **FAA appeal** reads, “In the Hazard Determination and Affirmation, the FAA found that the Tower Road landfill at its proposed height “would be in the radar line of sight and vehicles [i.e., dump trucks and graders] operating at the landfill may cause radar reflection and consequently create false targets.” JA 7.

The Determination and Affirmation themselves provide no evidentiary basis for the “false target” finding. Indeed, we can find at most only two pages in a 462-page record to support it. The FAA’s aeronautical study reports that Airways Facility radar technicians have “identified the potential for false targets. At the current elevation of 5,423’ AMSL [above mean sea level], the landfill is below the radar line-of-sight. At the new height of 5,542’ AMSL, the large dump trucks, graders, and other heavy equipment create the potential for reflecting the radar and causing false targets.... The impact in this circumstance would be an erroneous position indication for the aircraft.”

The Denver Airport conclusion

The Denver Airport (Location) is part of a Continuity of Government Program and does indeed house an underground facility.

Such a facility may be put in place for such an event like the coming passing of Planet X.

Is Planet X inhabited?

According to Sitchin, the **Anunnaki** are from Planet X (Nibiru) and may explain stories of “giants” which were published in the bible and other writings. Some even say that Planet X has been transformed into a fully inhabitable **Dyson sphere**.

So what’s next?

I guess we will have to wait and see.
